INSPECTION & TESTING

REVISION GUIDE BY LEWIS BLAKEMORE
Wigan & Leigh College

INSPECTION & TESTING

Inspection and testing relies on a solid understanding of current standards, procedures and regulations – and staying up to date matters more than ever.

Test your knowledge with these multiple-choice questions. Good luck!

Q1	What is the primary purpose of electrical inspection?	Ans.
A	To increase electricity usage	
B	To ensure safety and compliance	
C	To reduce electricity bills	
D	To improve property value	

Q3	What does BS 7671 refer to in the electrical industry?	Ans.
A	Regulations for electrical safety in homes	
B	The IET Wiring Regulations	
C	A guide to product installation	
D	A standard for testing cables	

Q2	Which instrument is commonly used to measure current?	Ans.
A	Multimeter	
B	Ammeter	
C	Insulation Resistance Tester	
D	Voltmeter	

Q4	What is the unit of electrical resistance?	Ans.
A	Ohm	
B	Ampere	
C	Volt	
D	Watt

Q5	Which colour should the Neutral wire be in a standard UK electrical system?	Ans.
A	Green and yellow	
B	Red	
C	Blue	
D	Black	

Q6	What does the term "prospective fault current" refer to?	Ans.
A	The current flow during normal operation	
B	The maximum current a circuit can safely handle	
C	The potential short-circuit current	
D	The resistance of the fault loop	

Q7	Which document should be completed after testing an electrical installation?	Ans.
A	Risk Assessment	
B	Maintenance Log	
C	Certificate of Conformity	
D	Electrical Installation Certificate	

Q8	What is the purpose of an RCD?	Ans.
A	To measure voltage	
B	To protect against overcurrent	
C	To detect earth faults	
D	To monitor circuit resistance	

TEST YOUR KNOWLEDGE
EARTHING SYSTEMS

REVISION GUIDE BY LEWIS BLAKEMORE

EARTHING SYSTEMS

Understanding the main types of earthing systems helps electricians work safely, confidently and in line with current requirements.

Test your knowledge with these multiple-choice questions. Good luck!

Q1	What is the main purpose of an earthing system in an electrical installation?	Ans.
A	To protect against voltage drops	
B	To ensure proper circuit functionality	
C	To prevent overloading	
D	To provide safety by directing fault currents to the ground	

Q2	In a TT earthing system, what is the primary earthing connection?	Ans.
A	The neutral conductor	
B	A local earth electrode	
C	The transformer housing	
D	The consumer unit	

Q3	What is the acceptable maximum earth electrode resistance for a TT system?	Ans.
A	100 ohms	
B	200 ohms	
C	300 ohms	
D	400 ohms	

Q4	What colour is the earth wire in modern UK wiring?	Ans.
A	Red	
B	Yellow	
C	Green and yellow	
D	Blue	

Q5	Which regulation covers earthing systems in UK electrical installations?	Ans.
A	BS 7671	
B	BS 1363	
C	BS 2754	
D	BS 5266	

Q6	In a TN-C-S system, where is the neutral connected to earth?	Ans.
A	At the appliance	
B	At the transformer	
C	At the substation	
D	At the consumer's intake position	

Q7	What does the "T" in a TT earthing system stand for?	Ans.
A	Transformer	
B	Tethered	
C	Terra	
D	Terminal	

Q8	Which earthing system does not have a direct connection to earth at the consumer end?	Ans.
A	TN-C-S	
B	IT	
C	TT	
D	TN-S	

Q9	In a TN-S system, how is the earth provided?	Ans.
A	Through the neutral conductor	
B	Through the metallic sheath of the supply cable	
C	Through a separate electrode	
D	Through the consumer's earth rod	

Q10	What is the primary risk if earthing is not done properly?	Ans.
A	Voltage fluctuations	
B	Electrical shock	
C	Increased energy consumption	
D	Overloaded circuits
